Education

New York University (NYU) Expected Graduation: December 2026

Bachelor's Degree in Computer Science (Major GPA: 3.75 / 4.00)

NYU POISE Scholar: Selected as 1 of 4 recipients of NYU's competitive full-tuition POISE Scholarship (∼$120K)
Relevant Coursework: Data Structures, Algorithms, Operating Systems, Software Engineering, Computer Vision

Experience

Software Engineer Intern May 2026 – Present

Dockware *Tulsa, OK*

- Migrated a customer-facing web app's browser tests from Cypress to Playwright across auth, shipments, admin, and compliance flows (12+ PRs), cutting CI from ∼45 minutes originally to ∼8 minutes per PR and removing Cypress from the stack.
- Improved reliability of vision mission review by fixing cloud image loading (API payload first, object storage fallback), adding shareable tags/notes/filters for debugging missions, and hardening a Gemini vision-label pipeline to detect gibberish OCR fields, retry once, and keep valid fields so bad model output doesn't corrupt production data.
- Shipped full-stack features for an internal ops platform used to plan and ship computer-vision hardware installs (React, TypeScript, Hono, PostgreSQL, S3)—including shipment/manufacture tracking, packing lists, readiness checklists, interactive timelines, and multi-file document uploads with audit logging.

AI & Data Automation Intern Jan 2026 – Apr 2026

TCC Skills Lab *Tulsa, OK*

- Built and deployed a full-stack internal analytics dashboard (React, Vite, Tailwind CSS, Vercel) for a 4-person team tracking 100+ workforce learners—replacing spreadsheet workflows and weekly status meetings with a real-time, self-serve view of KPIs (completions, hires, at-risk flags).
- Engineered a Google Apps Script pipeline that merges 3 Coursera CSV exports, deduplicates learners by email, classifies engagement status, and serves live data to the React app via a JSON API—cutting a 6-step manual CSV process down to a single file upload with scheduled triggers and regex-based file detection.
- Integrated the Airtable API and auto-categorized learners into active/inactive/at-risk views, eliminating ∼4 hours/week of manual data entry after validating 300+ learner records for reporting integrity.

Software Engineer Intern Jun 2023 – Sep 2023

SPEAKHIRE *Remote*

- Implemented matchmaking algorithm to pair students with mentors using React and TypeScript, driving a **+62% increase in matches.**
- **Built dashboard from 0 to 1** using React MUI and TypeScript, providing school administrators with actionable insights into the efficacy of the mentorship program.
- Transformed raw attendance data from 50+ mentoring sessions into **interactive visualizations** on the website by integrating D3.js, enhancing data presentation and user understanding of attendance trends.

Projects

syllabusPlus — *MongoDB, Express.js, React, Node.js, Vercel*

- Developed a full-stack mobile web app where students create, share, and browse peer study resources for courses—with JWT authentication, role-based access (student vs campus rep), and an approval workflow for courses and resources.
- Implemented Express APIs and MongoDB models for courses, resources, and saved courses (including file uploads), and set up Vercel CI/CD so pushes to main run tests and auto-deploy.

Technical Skills

Languages: JavaScript, TypeScript, Python, C++, C, SQL

Databases: PostgreSQL, MySQL, MongoDB

Frameworks & Libraries: React, Node.js, Express.js, Hono, Next.js, Tailwind CSS, Playwright, D3.js

Developer Tools: Git, GitHub, Docker, AWS S3, CI/CD, Vite, Postman, Google Apps Script, Figma
